WHO I AM

I am an intermediate embedded systems developer with experience in the Industrial Internet of Things looking for new challenges and new learning opportunities in the captivating world of computer engineering.

ROLES I FIT INTO

I have experience in a plethora of languages and coding practices that are transferable between many different roles. If your role can offer enticing, challenging, and demanding work, that sounds like the perfect role for me. Based on past experience, I am most suitable for embedded development or desktop development in C/C++. However, I am more than happy to step into new roles, face new challenges, and solve complex problems. I often find that many solutions in computer engineering are transferable to other levels of a programming stack.

WHY YOUR COMPANY?

This is a difficult question to answer without getting to know you and your company. Feel free to reach out to me at gmeul.public@gmail.com. Let's have a 30 minute chat and find out together if I'm the right fit for your company!

Thank you for your interest in me,
Graham Meulendyks
